

Linux

```
docker run -p 13306:3306 --name mysql mysql:
```

```
mysql -h127.0.0.1 --port 13306
```

The diagram illustrates a connection from a MySQL client to a Docker container. A vertical arrow points from the port '13306' in the client command to the port '13306' in the Docker command. A horizontal line extends from the right side of the Docker command, and a vertical line drops down from its end to the top of the diagram area.
